

For Immediate Release

February 15, 2022

First and foremost, we at Reliable Engineering would like to extend our thoughts and prayers to our nation and the world that has been impacted by the COVID-19 virus. We will diligently monitor and follow the Federal and State recommendations to ensure the safety and health of our employees and our clients.

As an essential business, we play an important role to our nation moving forward and will strive to safely continue to provide service to our industrial and commercial clients. We will directly monitor our suppliers to minimize any supply disruptions. In doing so, we will continue to practice the guidelines provided by the CDC and continue to follow the safe work practices below.

- ❖ Practicing social distancing guidelines at home and work.
- ❖ Discussing COVID-19 precautions and guidelines at morning toolbox talks.
- ❖ Office personnel working remotely.
- ❖ Limiting crew interaction.
- ❖ Using phone, email and video conferencing as means of communication.
- ❖ Frequent hand washing and use of sanitizer.

Our team is available 24/7 to meet all your Engineering needs. Salesmen are available for onsite visits or virtual meetings at any time and our onsite crews are ready to move at any moment. You can also check out our webpage @ www.reliableengineering.com, and our LinkedIn page. As we move forward through these tough times, we can get through this if we band together and help one another. Remember to check on those who have been designated most vulnerable. If you're able, make a donation to your local food bank, or visit The Salvation Army and donate blood. It could save a life!

As always, stay healthy and safe. We look forward to continuing to work with you.
